WORK / PROJECT EXPERIENCE

OneSeason (Travel Web Application)
August 2021 – Jun 2022

I was responsible for leading the team for this project to develop a digital platform connecting hoteliers and travellers. OneSeason was implemented using React JS, Node JS, Express, Bootstrap CSS and mongo DB which resulted in a clear, responsive, easy/quick navigation and fast search mechanism aiding the visitors and travellers find what they are looking for faster. Therefore reducing bounce back by at least 60%, thus improving the ranks in search engines towards 35% and increasing the response time of every request by 45%.

Perfect Sharon (E-commerce Web Application)
February 2021 – July 2021

Perfect Sharon was designed to reflect a modern take on women's underwear with the focus of offering simple and sporty-style bikinis that are comfortable, affordable, attractive and pleasant manner. My role was to provide an E-commerce application that is accessible, easy, fast, smooth in navigation, user friendly, and can scale in terms of traffic. I was able to achieve these by using technologies like Python / DJango for server side and React JS for frontend.

EaglesEye (Properties Web Application)
March 2020 – December 2020

Developed a property web application targeted for users in UAE to have a seamless platform where sellers, buyers, and tenants are able to connect and provide a common and reliable source for the UAE real estate market. Intended to be a one-stop database of available listings of all properties for sale and rent. With my combination of modern practices in React, JavaScript, Typescript, CSS, HTML and Node.js I was able to improve the time of page load for the average user by 2 seconds. I was also able to increase the page views per session by 22%

Turbine (Web Application for Growing Businesses)
September 2018 – July 2019

Built Turbine app as a common ground to enable both influencers and promoters to connect seamlessly to grow their business and generate income for themselves. I used top industry PHP's leading library called Laravel thus saving time and resources by 60% generating a must-have common features found in almost every application like Authentication, Registration, and Logins to mention a few. Overall using the Laravel MVC architecture to avoid code duplication and separating business logic from the presentation logic, coupled with the PHP Active Record implementation I improved our development time by 40% and project scalability by 15%.

Subsequent Projects
